CASE STUDY

WIKINGER - Secondary foundation works

SCOPE

CWind was appointed on a 17 month contract to provide project and SHEQ management, project technicians and equipment to undertake secondary works at Wikinger offshore wind farm during the construction phase. Our teams are undertaking a range of mechanical, electrical and welding tasks including removing the levelling system, completing and testing earthing arrangements, cutting and modifying jacking brackets where necessary. In addition, works include corrosion protection and TP inspections ready for handover to the client. CWind also provides confined space management, including the design, fabrication of additional equipment required, testing, maintenance and recertification as well as the monitoring of atmospheric conditions.

PROJECT DELIVERY PACKAGING

CWind provides a comprehensive package to the client. By covering all elements of the required work, CWind ensures tight communication within the teams and work plans that correspond to client requirements. By combining the confined space operations with the foundation work, CWind provides additional synergies to the client and delivers a cost and time-effective solution. The project is managed from our German office in Bremen with our on-site project team consisting of multi-skilled German and English speaking technicians.

FLEXIBILITY

CWind offers a flexible team on site covering both onshore and offshore tasks. Team continuity is key to the project with the current project team fully incentivised to remain on the project and meet quality requirements.

SAFE WORK

Safety, health, quality and care for the environment are fundamental principles of our business. The safety and health of our colleagues, customers, business partners and the communities in which we do business is our number one priority. All RAMS were compiled by CWind and reviewed by the client. Throughout the project the RAMS are updated and reviewed following changes to processes and following suggestions of improvements. Reports are shared with the client, and detailed records are maintained.
